About

M.Sc. in Computer Science, graduated in June 2026 (Cum Laude), obsessed with technology. Prev. Research intern at EVS Broadcast Equipment and Toyota with a paper accepted at **CVPR 2026** (second author).
Areas of interest: Machine learning, distributed systems, computer vision, cloud computing, and embedded systems.

Education

University of Liege — Liege, Belgium
M.Sc. in Computer Science (Intelligent Systems) — *Sep 2024 - Jun 2026*

- Relevant coursework: Machine Learning, Deep Learning, Intelligent Robotics, Information Theory, Computer Vision, Machine Learning Systems Design, Distributed Systems, Compilers, OOP for Mobile Applications.

University of Liege — Liege, Belgium
B.Sc. in Computer Science — *Sep 2020 - Sep 2024*

- Relevant coursework: Operating systems, Discrete Mathematics, Statistics, Computation Structures, Parallel Programming, Embedded Systems, DSA, OOP, Networking.

Work Experience

EVS Broadcast Equipment — Liege, Belgium
Innovation Intern — *Dec 2025 - Jun 2026*

- Designed and trained a modular feed-forward 3D reconstruction pipeline for soccer broadcast scenes, with novel-view synthesis taking ~1s per scene (instead of minutes) on a single GPU.
- Authored thesis awarded 17/20 (Magna Cum Laude).

Toyota Motor Europe — Brussels, Belgium
AI Research Intern — *Sep 2025 - Dec 2025*

- Paper accepted at CVPR 2026 main conference (second author).
- Implemtend a dynamic token selection, improving recall by up to 30%. Evaluated and performed ablations (100+ experiments).

Montefiore Institute — *Liege, Belgium*
Computer Scientist — *Sep 2023 - Dec 2025*

- Implemented a bootloader with updates over CAN bus for the ARM Cortex-M4 in C with libopencm3.

University of Liege — Liege, Belgium
Teaching Assistant — *Sep 2021 - Sep 2024*

- Instructed a class of ~20 students during the practical sessions of an introductory Python course.

Projects

Personal website — *Jul 2026*

- Developped his portfolio with Astro. Hosted on Google Cloud and deployed with GitHub Actions.
- Tools: Astro, SolidJS, TypeScript, UnoCSS, Google Cloud, GitHub.

Monte Maps (Indoor Google Maps without GPS) — *Jun 2026*

- Implemented a Google Maps-like application localizing the user from its camera, running on-device in real-time.
- Tools: Python, PyTorch, COLMAP, MegaLoc, Viser.

MineTexture: Diffusion for Minecraft texture generation — *Jun 2026*

- Built a web application to create Minecraft textures from a text prompt.
- **Tools:** Python, PyTorch, FastAPI, Stable Diffusion 1.5, LoRA, Docker, Google Cloud Platform.

YOLOv5 (m) from scratch — *Mar 2025 - May 2025*

- Implemented the backbone of the model. Trained the model on a dataset of 3k Minecraft images.
- Tools: Python, Scikit-learn, PyTorch, Google Colab, Weights & Biases. Grade: 15/20.

MyVentory, Flutter inventory app with .NET + Postgres backend — *Sep 2024 - Jun 2025*

- Developed the REST API (+40 endpoints) for user interactions. Deployed the product with CI/CD pipelines.
- Tools: GitLab, OpenShift, .NET, C#, Postgres, Docker, Flutter.

Dance Dance Revolution in assembly — *Mar 2024 - Jun 2024*

- Built a Dance Dance Revolution game (~7000 lines of assembly) on a 32MHz MCU with 2KB of RAM.
- Tools: PIC Assembly, PWM, PAL standard. Grade: 20/20.

Skills

Programming Languages: Python, C, Java, SQL, PHP, C#, Dart, PIC Assembly, TypeScript.
Tools and Frameworks: PyTorch, Scikit, Docker, Google Cloud, Git, Jira, Linux, OpenMP, Flutter, LaTeX.
Languages: French (fluent), English (fluent), Dutch (basic)
